SUMMARY

A detail-oriented Computer Science undergraduate (graduating July 2026) with a keen eye on identifying data inconsistencies and formatting errors. Knowledgeable in building SQL, Excel, and Power BI-based data pipelines to process data through hands-on data validation and quality assurance work. Possesses a high attention to detail and strong foundation in data analysis. Looking to bring this attention to detail to a Junior Data Quality Analyst role supporting data migration and conversion projects where accuracy and completeness aren't optional.

EDUCATION

Batangas State University – The National Engineering University, Alangilan Campus

Bachelor of Science in Computer Science

Alangilan, Batangas City

August 2022 – July 2026

- **General Weighted Average:** 1.53 (1.0 Highest)
- **Relevant Coursework:** Database Management System, Data Analysis, Fundamentals of Data Science, Machine Learning

EXPERIENCE

Quality Assurance Engineer Intern

Batangas State University – TNEU, Pablo Borbon Campus

Center for Artificial Intelligence and Smart Technologies (CAIST)

June 2025 – July 2025

- Kept defect resolution on track by documenting and logging software defects and system anomalies in OpenProject, reporting directly to a senior Lead Developer for fast turnaround.
- Caught defects before production by executing manual and automated validation testing (PHPUnit, Playwright) across the system.
- Delivered a clean technical handoff by designing structured defect logs and testing documentation in Microsoft Excel for newly hired developers to pick up without lost context.

PROJECTS

EXCEL ANALYTICS PORTFOLIO

Personal Project

- Built six independent Excel projects across retail, F&B, and e-commerce datasets, implementing Power Query, relational data modeling, Pivot Tables, and client-ready interactive dashboards to transform raw data into business insights.
- Identified formatting errors, duplicates, and inconsistencies before transforming into an interactive dashboard, by cleaning and validating each dataset with sorting, filtering, VLOOKUP and other LOOKUP functions, and IF-based logic.

THE TERRAIN TAX ANALYSIS PIPELINE

Personal Project

- Migrated 241,000+ raw geospatial records from Wikiloc into a validated, structured, relational format, by engineering a fully automated source-to-target ETL pipeline (playwright for scraping, Python for cleaning, pyodbc for loading) into a scalable SQL Server backend with optimized T-SQL and non-clustered indexing.
- Revealed how gradient stress neutralizes momentum advantages between Road and Mountain Bike architectures, by building an interactive Power BI dashboard directly from validated SQL aggregations.

SUBSCRIPTION-BASED SOFTWARE AS A SERVICE

Personal Project

- Isolated a 15.8% “True Churn” rate exposing immediate retention risks by building a Python-based data sanitation pipeline over 6,000+ synthetic telemetry logs with injected anomalies, documenting a field-level data dictionary for the cleaned schema, and running SQL diagnostics (CTEs. Window functions).
- Modeled MRR concentration and feature adoption into an executive-ready Power BI dashboard, aligning strategic decisions with real user behavior through DAX measures built on relational database metrics.

OPTIMIZATION AND DOMAIN-ADAPTIVE PRE-TRAINING OF DISTILMBERT FOR SENTIMENT ANALYSIS IN TAGALOG-ENGLISH CODE-SWITCHED TEXT

Thesis

- Spearheaded a 3-member research team through the end-to-end thesis lifecycle, managing task delegation and research milestones to ensure highly cohesive and on-time task delivery.
- Built a reliable hybrid training dataset with minimal near-duplicate contamination, as measured by cosine similarity thresholds applied to LaBSE embeddings, by cleaning and preprocessing unstructured real-world Taglish e-commerce data and layering in strategic synthetic data augmentation.
- Engineered a lightweight DistilMBERT architecture for complex Taglish sentiment analysis, shrinking the model footprint from 520MB to 133MB to achieve a 31.42ms inference latency, delivering a 2.98x speedup and 98% performance retention (79.95% macro F1 Score) compared to the base model.

SKILLS

- **Data Analysis & Tools:** MS Excel (LOOKUP Functions, IF Statements, Pivot Tables, Power Query, Sorting and Filtering), SQL and T-SQL (SELECT Statements, Views, Filters, Aggregate Functions, Subqueries, JOINS), Power BI (DAX, Data Modeling), Python.
- **Data Quality and Concepts:** Data Validation, Quality Assurance, Relational Databases (tables rows, columns, data types), Data Dictionaries
- **Software and Technology:** MS Office (PowerPoint, Word), Canva, AI Productivity Tool, Git, Github, Playwright, OpenProject
- **Core Skills:** High Attention to Detail, Clear Communication, Cross-Functional Collaboration, Strong Willingness to Learn, Analytical Thinking, Team Collaboration, Time Management
